Kaela Baughs

Business Analyst | Process Improvement | SaaS Operations
Atlanta, GA | baughsk@gmail.com | linkedin.com/in/kaela-baughs

Summary

Process-focused analyst with two years as a Business Process Analyst at Hewlett Packard Enterprise and current SaaS operations experience at Linden Lab. Designed an incident response process that stopped repeat Severity 1 SLA breaches and was adopted across every enterprise account on the program, and redesigned a manual follow-up workflow that cut daily manual cases from about 40 to about 10. Founded and run a virtual product business with 1,000+ items released. CompTIA Security+ certified; Scrum Master certification expected December 2026.

Experience

Customer Success Specialist | Linden Lab | Nov 2024 - Present

- Redesigned a high-volume manual follow-up workflow after a business expansion raised daily requests from 30+ to 80+, about half of them time-sensitive cases needing individual follow-up. Replaced manual handling with a longer response window and automated, report-driven reminders, cutting manual cases from about 40 to about 10 a day.
- Eliminated a task that took about 75% of the team's time on one account and cleared a backlog of overdue cases left unresolved for over a week. Daily request volume now averages about 35, down from 80+.
- Led the rollout of the new process to 2,000+ customers: updated the customer policy agreement and announced the change through direct notices, group messages and signage.
- Built a Discord bot that pulls data from a third-party management system and posts automatic reminders to the team, so deadlines and key dates no longer depend on memory.
- Set up a daily log of reminders sent, which the team uses as the record when customer disputes come in and as coverage when someone is out.
- Joined the support team hired to work down a 2,000+ ticket backlog, resolving technical and account issues by email and chat across three client accounts.

Founder and Owner | Virtual Fashion Store, Second Life | Mar 2020 - Present

- Built and run a clothing and accessories brand inside Second Life, releasing 1,000+ items designed in Blender and Adobe Substance Painter over six years.
- Manage a four-person team (blog manager, customer service rep and listing manager) and the release schedule in Trello.
- Set up a Discord ticketing system for customer support and grew a community of 600+ Discord members and a 4,000+ member in-world customer group.

Hewlett Packard Enterprise | Alpharetta, GA | Aug 2016 - Dec 2019
Business Process Analyst | Dec 2017 - Dec 2019

- Mapped and designed a cross-functional incident response process after repeated Severity 1 SLA breaches for a Fortune 500 client, defining roles for PMO, Tier 2, logistics, reporting and account management. SLA misses stopped within six weeks, and the process was adopted across every enterprise account on the program, including other Fortune 500 clients.

- Built in a safety-stock agreement with Logistics so every client site could receive switches, access points and cabling within SLA, plus hourly stakeholder updates and post-incident root cause reviews with the client.
- Worked as the only Business Process Analyst on the Atlanta team, partnering with the Bangalore BPA team on shared processes and documentation.
- Delivered service health and risk reporting to leadership and maintained SharePoint knowledge repositories and process documentation.

AWE Support Specialist | May 2017 - Dec 2017

- Created and managed process maps in Visio for the Partner Engagement, Change Management and leadership teams as part of the Business Process Analyst team.
- Built and managed SharePoint sites and automated workflows for teams across the business using SharePoint Designer, and led the build and launch of a SharePoint team site for a Fortune 500 client account.
- Ran weekly meetings with team members and customers to identify and close process gaps, and drove root cause analysis documents from draft to completion at customer request.
- Logged cases and built reports in Salesforce, and coordinated replacement parts orders and onsite technician dispatch with Tier 2 Networking for enterprise Network-as-a-Service sites.

Partner Engagement Team Lead | Aug 2016 - May 2017

- Served as the escalation point for a 10 to 15 person partner engagement team, answering team questions, training new members and making sure every partner request was resolved correctly.
- Coordinated replacement parts orders and onsite technician dispatch with Tier 2 Networking for enterprise Network-as-a-Service sites.

Helpdesk Technician | Georgia Southern University | Aug 2013 - Jul 2015

- Provided Tier 1 technical support to students, alumni, faculty, staff and parents at the Center for Academic Technology and IT Services helpdesks, covering every product and software the department supported.
- Reset passwords and unlocked user accounts in Active Directory, and helped users with SharePoint and Microsoft Office.
